Sidel recognised as provider of high-quality vocational training

The leading packaging solution provider recently received French Qualiopi Certification for its global training methodology, reinforcing Sidel’s commitment to provide additional value to customers through long-term support programmes.

Sidel’s commitment to providing high-quality specialist training for its customers around the world was recently reinforced with the award of the French Qualiopi certification. This independently assessed mark of quality for vocational training and skills development, provides assurance that a training provider has rigorous quality management processes in place, while enabling customers in France to access funding that covers part of the training cost.

“We are committed to offering customised training programmes to every single one of our customers, working in partnership with them to assess existing skills, to identify gaps and needs and to propose specific training to ensure continued safety, product quality and line efficiency,” said Olivier Cocheril, VP Asset Performance & Maintenance Services.

“By attaining Qualiopi certification we are assured that the rigorous methodology used by our teams across the world is ensuring consistent high-quality training for all course participants.”

Sidel delivers customised training options to more than 5,000 trainees per year, providing over 350 different courses to meet the specific needs of individual customers around the world. Recognising that every production line and operational job profile is different, courses can be tailored to ensure that customers achieve maximum operational efficiency in their facility throughout the lifecycle of a line.

In addition to virtual and onsite training, Sidel operates a global network of specialist training centres, led by teams of expert trainers with extensive knowledge of PET, can and glass production processes. Training centres are equipped with facilities, physical and virtual learning environments set up to replicate some production conditions. This avoids interruption to a customer’s operations.

“Our 14 specialist training centres in Europe, Asia and North America offer training experiences for thousands of customer team members each year, putting them through their paces in a series of scenarios designed to enhance their skills and equip them with the expertise to operate their line at maximum efficiency.”

“Customers have told us that they value both the blended offer and our understanding to meet their specific needs,” said Olivier Cocheril.

Based on over 50-years of proven experience, Sidel's training offering, provided for customers around the world, helps shape the factory of tomorrow.
